

Tariff Structure on C.G.T Services

- This tariff has been imposed by P.M.E.X.
- It is charged on services pertaining to computation of Capital Gains Tax.
- This is a one-time charge over the course of each Fiscal Year (Jul to Jun).
- It is based on annual traded value in Rs.
- As soon as a client migrates to a higher tariff slab, only the differential tariff would be deducted.
- Tariff structure is tabulated below:-

S/No.	Traded Valued (Rs.)	Tariff (Rs.)
1.	Up to 0.1 MN	Nil
2.	0.1 to 5 MN	250
3.	5 to 10 MN	360
4.	10 to 50 MN	600
5.	50 to 100 MN	1,800
6.	100 to 500 MN	5,000
7.	500 MN to 1 BN	7,000
8.	Over 1 BN	10,000

Example:-

The traded value of Mr.X on 15th Mar, 2018 was b/w Rs.10 and 50 MN, so the prescribed tariff for Mr.X is Rs.600 (S/No.4). Now, on 16th Mar, 2018, the traded value of Mr.X surpasses Rs.50 MN. Now, Mr.X has moved to a higher slab of Rs.50 to 100 MN (S/No.5). Now, only Rs.1,200 additional will be charged to his trading a/c which is the diff of (1,800 – 600). This is the concept of differential tariff.
